

Restart information for the Sendai nuclear power station

September 10, 2015

Kyushu Electric Power Company Inc.

Return to Normal Operation of Sendai Nuclear Power Unit No. 1

Sendai Nuclear Power Unit No.1, a pressurized water reactor with 890 MWe of rated electric power, had been under its 21st periodic inspection since May 10, 2011 and had started its test operation after its restart of power generation on August 14, 2015.

We hereby announce that as of 16:00 today, the Unit No. 1 returned to its normal operation after the completion of final regulatory inspection which is the final inspection of all pre-service inspections and facility periodic inspections.

We will continue to proceed with the unit operation considering safety as the first priority.
