

## **Start of Power Generation at Mihama Unit No.3**

June 29, 2021

Takashi Morimoto  
President and Director  
Kansai Electric Power Co., Inc.

We hereby announce that Mihama Unit 3 has started power generation at 15:00 today.

In Mihama, the birthplace of our nuclear power, we have been able to mark a new step toward operating for more than 40 years for the first time in Japan after the new regulatory requirements took effect. We would like to express our sincere gratitude to everyone who has made extraordinary efforts to make it possible, including the location area.

In the future, we will gradually increase the generator output and check the plant condition for each output. We will continue to respond sincerely and thoroughly to the inspections to be performed by the Nuclear Regulation Authority, and each and every employee of our company and partner companies will proceed with the work carefully with the highest priority on safety, with the strong will and determination to untiringly improve the safety of nuclear power generation.

END
