

(Comment) Restart to Commercial Operation at Mihama Unit No.3

July 27, 2021

Takashi Morimoto
President and Director
Kansai Electric Power Co., Inc.

We hereby announce that Mihama Nuclear Power Station Unit 3 has restarted commercial operation after the integrated performance test was completed today at 17:00.

We would like to express our sincere gratitude to everyone who has made extraordinary efforts, including the location area, toward the restart of the operation for more than 40 years for the first time in Japan after the new regulatory requirements took effect.

We believe that making the most of nuclear power plants for more than 40 years is extremely meaningful from the perspectives of "stabilization of the electric power supply and demand" and "promotion of zero-carbon."

Based on our strong will and determination to untiringly improve safety by deeply bearing in mind the reflections and lessons learned from the serious fatal and injury accident that occurred 16 years ago, we will establish a track record of safe and stable operations one by one at Mihama Nuclear Power Station Unit 3.

END
