

Completion of Fuel Loading at Shimane Unit 2

We are pleased to announce that we have completed fuel loading* at Shimane Nuclear Power Station Unit 2 at 11:19 today.

Fuel loading work began on October 28th (already announced on the same day), and all 560 fuel assemblies were loaded over a period of seven days.

With safety continuing to be our number one priority, we will steadily proceed with each and every preparation for restarting operations, including inspecting and testing equipment related to reactor startup.

* The process of moving fuel assemblies from the fuel pool to the reactor and loading them.
