

## Reactor Startup at Shimane Unit 2

We are pleased to announce that we started up the reactor at Shimane Nuclear Power Station Unit 2 (boiling water reactor, rated electrical output: 820,000 kW) at 15:00 today.

If inspections and checks proceed as planned, we plan to proceed with the restart process as follows.

- Generator paralleling (restart): Late December 2024
- Resumption of commercial operations: Early January 2025

We will continue to prioritize safety and carefully proceed with each step, including inspecting and checking equipment in preparation for generator paralleling (restart) and resumption of commercial operations.

## Reactor Startup at Shimane Unit 2

We believe that we have reached an important milestone in the restart process.

We will continue to prioritize safety and take even greater vigilance as we steadily proceed with equipment inspections and checks for generator parallelization (restart) and resumption of commercial operation, ensuring that the restart process is complete.

Furthermore, we will strive to appropriately disclose information about the status and efforts of the power plant, and will provide detailed explanations on various occasions, aiming to be a power plant that local residents can feel safe in.
