Start of Constant Rated Thermal Power Operation at Shimane Unit 2

We are pleased to announce that we have begun constant rated thermal power operation* at Shimane Nuclear Power Station Unit 2 (boiling water type, rated electrical output: 820,000 kW) at 4:00 today.

We will continue to prioritize safety and steadily confirm the soundness of the equipment in operation in order to resume commercial operations scheduled for January 10, 2025, and to continue stable operation thereafter.

* A method of operating the reactor power (amount of heat generated by the reactor) at a constant level near the maximum value (2,436 MW) approved by the government. Electrical output may fluctuate from 820,000 kW.

Reactor Startup at Shimane Unit 2

We believe that we have reached an important milestone in the restart process.

We will continue to prioritize safety and take even greater vigilance as we steadily proceed with equipment inspections and checks for generator parallelization (restart) and resumption of commercial operation, ensuring that the restart process is complete.

Furthermore, we will strive to appropriately disclose information about the status and efforts of the power plant, and will provide detailed explanations on various occasions, aiming to be a power plant that local residents can feel safe in.
